                                                                                                                                                                                                   The present sequence represents a human transcriptional regulatory factor containing a bromo domain. The factor interacts with proteins involved in the chromatin-mediated transcription regulatory mechanism. It binds to hswr2H, hswr2L and NCOA-62/Skip. It can be used for screening compounds binding to it and acting as agonists or antagonists, which are potentially useful for the treatment and prevention of cancer and

Epitopes of the encoded protein can be used in defining functional domains of HCF, identifying compounds that associate with HCF or designing compounds capable of modifying large viranscription. Such agents can be used to treat viral infection

Title: Refere	The VP16 accessory protein HCF is a family of polypeptides processed number: A40718; MUID:93327419; PMID:8392914
A; Status	Accession: A40/16 Status: preliminary; not compared with conceptual translation

A; Molecule type: mRNA; protein
A; Residues: 1-2035 <WIL
A; Residues: 1-2035 <WIL
A; Cross references: PIDN:AAB27583.1; PID:g399752
A; Experimental source: HeLa cell
A; Note: sequence extracted from NCBI backbone (NCBIP:135349)
